

Service Description

SA1251 Anybus Infrastructure & Wireless Implementation Assistance

The HMS Technical Services team is here to help you make the most out of your HMS products. We offer technical assistance and training to help projects move forward. This service speeds up design and implementation of your industrial automation projects. We assist with review of application to identify any hurdles and point out where special attention might be needed. Give tips, hints and suggested configuration of the assessed application. Based on drawings of building and installed machinery we can provide a predictive site survey and give recommendations on how to install a Wi-Fi network. Site surveys can of course also be done on premise.

Service includes one or more of the following

- Assist with configuration based on intended design and application.
- Application review and review of communication logs.
- Guidance on best practice regarding setting, timers etc.
- Guidance on wireless installation and predictive site survey.
- Based on application suggest products, useful functionality and how to combine.
- Recommend wireless technology to use.
- Recommend solutions for security and redundancy.
- Recommendation of tools and documentation that will reduce configuration time
- Guidance in configuration and installation

Time and Location

At HMS in Halmstad, at customers site, Teams or Zoom. Charged per hour plus. Please note that when services are performed at customer site, travel time and travel expenses will be charged extra.

Pre-requisites/Customer Providing

- Description of use case and wanted result.
- Description of included machines, PLC's etc.
- Description of protocols used
- Floor plans and blueprint of building (for predictive site survey).

Deliverables

- Report on suggested recommendations, products, antennas, settings and security aspects to consider.
- Survey report with suggest placing of access points and antennas.
- Links to documentation and similar resources

Important Information

To be able to advise regarding wireless coverage, drawing of building is needed to give accurate recommendations.
